Quiz: Directory Services

Question 1:

Which of the following is not an advantage of replication of data in terms of directory services?

It provides redundancy for data.

It allows flexibility, allowing for easy creation of new object types as needs change.

It allows local management of user accounts.

It decreases latency when accessing the directory service.

Question 2:

Which directory service software would be used exclusively on a Windows network?

DSP

Active Directory

OpenLDAP

DISP

Question 3:

Which of these are advantages of centralized management using directory services? (Choose all that apply)

Access and authorization are managed in one place.

Configuration management is centralized.

Configuration can take place on each device.

Role-Based Access Control (RBAC) can organize user groups centrally.

Question 4:

In LDAP, what does dn stand for at the beginning of the entry?

Distinguished number

Distinguished name

Domain name

Distinct name

Question 5:

Which of the following are ways to authenticate to an LDAP server? (Choose all that apply)

PGP

SASL

Simple bind

Anonymous bind
